

JET BLACK & OXFORD WHITE

INTERIOR PREFINISHING

Jet Black and Oxford White are premium waterborne finishes that are specifically designed to provide exceptional performance. They are formulated with a proprietary blend of self-crosslinking acrylic and urethane resins to yield a finish that is tough, long-lasting, and resistant to household chemicals.

WE PAINT AT THE COMPONENT LEVEL, NOT AFTER ASSEMBLY.

Finish Process

- | | | | | | | | |
|----------|--|----------|---|----------|---|----------|--|
| 1 | Wood is shaped to the correct profile | 3 | Profiles are dried further in a proprietary infrared oven | 5 | First coat of finish is applied (spray-application) | 7 | Second and final coat of finish is applied (spray application) |
| 2 | Wood profiles are submersed in preservative treatment, as per WDMA standards, and oven-dried | 4 | Profiles are inspected and sanded in preparation of finishing | 6 | After drying, finish is lightly sanded again | 8 | Final touch-up and sanding, if required |

These low-VOC/HAP-free finishes have great flow and leveling characteristics, as well as superior coverage with a fantastic feel, while meeting ANSI/KCMA and WDMA TM-14 standards.
